A. Design Guidelines

Water Efficiency	<p>Priority 1 - Must Do</p> <ul style="list-style-type: none">▪ Minimize water use by using water efficient toilets/sinks/ basins <p>Priority 2 - Should Do</p> <ul style="list-style-type: none">▪ Design roof to capture rain water - with simple inexpensive adjustments, rain water can be effectively captured
Indoor Quality	<p>Priority 1 - Must Do</p> <ul style="list-style-type: none">▪ Use paint, adhesives and caulks that have low or no – Volatile Organic Compounds (VOC) have been connected to cancer and other health concerns▪ Design buildings for maximum air circulation within the building

Ecological Impact	<p>Priority 1 - Must Do</p> <ul style="list-style-type: none"> ▪ Choose building sites to minimize adverse effect on biodiversity – for e.g. avoid felling of trees to the extent possible considering the availability of land at the Project Site ▪ Use wood from indigenous / local trees to avoid introducing alien species of insects ▪ Use organic, locally available insulation such as hay bales or saw dust wherever possible - Reduce insulation costs and make it eco-friendly ▪ Conserve old trees– proper planning of the new structure to conserve old mature trees ▪ Only use indigenous trees/ bushes/grass for landscaping in the entire City ▪ Only use organic pesticide/fertilizer on soil ▪ Have eco-friendly pest control mechanisms that does not rely on synthetic pesticides <p>Priority 2 - Should Do</p> <ul style="list-style-type: none"> ▪ Use green roofing techniques - have a thin layer of substrate with grass and small plants - to absorb rainwater and reduce drainage requirements, provide insulation, purify air & be aesthetically pleasing ▪ Use engineered lumber - more environmentally friendly, stronger and straighter ▪ Have water permeable parking lots and roads (such as pervious concrete) to allow seepage and recharge of underground reservoirs, and reduce need for drainage ▪ Utilize biomimicry and permaculture design tools - study the local habitats and ecosystem for clues, in order to overcome various challenges faced during planning and construction
Waste Management	<p>Priority 1 - Must Do</p> <ul style="list-style-type: none"> ▪ Install separate and adequate waste collection bins for organic, recyclable and hazardous waste ▪ Separate sewage from wash water using dedicated pipes so that they can be refined easily <p>Priority 2 - Should Do</p> <ul style="list-style-type: none"> ▪ Use recycled materials as much as possible – re-used materials generally save on money and save space in the land-fill
Renewable Energy	<p>Priority 1 - Must Do</p> <ul style="list-style-type: none"> ▪ Use solar heating systems instead of gas/wood-powered ones <p>Priority 2 - Should Do</p> <ul style="list-style-type: none"> ▪ Install solar power on roof and small wind turbines within air passageways wherever possible ▪ Cool buildings by channelling cold water from upstream through building and release downstream, making use of gravity and reducing need to use energy for air-conditioning

Efficiency in Construction	<p>Priority 1 - Must Do</p> <ul style="list-style-type: none"> ▪ Place bins on site during construction to gather and reuse cut studs - This system will waste less lumber than cutting a new stud each time a shorter piece of lumber is needed <p>Priority 2 - Should Do</p> <ul style="list-style-type: none"> ▪ No headers in non-structural walls - Reduced lumber and lumber waste
Energy Efficiency	<p>Priority 1 - Must Do</p> <ul style="list-style-type: none"> ▪ Use passive solar design principles - face building the right way and have windows in right places to maximize solar gain during winter and minimize during summer ▪ Use thermal mass to even out temperature fluctuations between night and day ▪ Design building interiors (with skylights, solar tubes, etc.) to ensure ambient lighting and reduce the need for artificial lights during daytime ▪ Design buildings with adequate air ventilation during the summer ▪ Use energy efficient appliances/lighting such as Energy Star TM and LED lamps ▪ Use dark coloured roofing/outer walls to absorb sunlight in cold climate – will reduce heating costs ▪ Use double-pane, glazed windows and insulated frames – reduce heat loss and gain ▪ Seal around electric outlets – Air infiltration is a huge problem and the source of much energy waste. It is important to seal even the small air gaps around an electrical outlet as they have a big impact over the life of the building ▪ Use sufficient caulking and insulation on walls and roof to minimize heat loss ▪ House wrap – A common green building practice which helps to “tighten “ the home envelope <p>Priority 2 - Should Do</p> <ul style="list-style-type: none"> ▪ Install occupancy-aware lighting and heating appliances ▪ Use waste heat from refrigerators and air conditioners to heat water for domestic use ▪ During planning, conduct life-cycle assessments of all major buildings using computer simulation tools

4 Hotel Category Guidelines
